

VEDANT PURI

OBJECTIVE

vedantpuri@cmu.edu | <https://vpuri3.github.io/>

PhD candidate graduating August 2026 seeking a technical role in machine learning research. Experience developing scalable-transformers and custom GPU kernels for large-scale training. Background in computational fluid dynamics.

EDUCATION

Carnegie Mellon University <i>Ph.D Mechanical Engineering.</i> Advisors: Levent Burak Kara, Yongjie Jessica Zhang Proposed thesis: <i>Neural representations for computational physics: from reduced order modeling to transformers</i>	Jan 2022–Present
University of Illinois Urbana-Champaign <i>B.S. Engineering Mechanics, B.S. Mathematics.</i>	2015–2019

SELECTED RESEARCH CONTRIBUTIONS

FLARE: Fast Low-Rank Attention Routing Engine <i>Efficient attention architectures</i>	2025
• Derived a flexible low-rank reformulation of self-attention via latent routing.	
• Reduced quadratic complexity of global communication in self-attention to linear complexity.	
• Demonstrated scaling to 1M tokens on a single H100 GPU, attaining over 200× speedup over vanilla self-attention.	
FLARE for Language Modeling (Ongoing dissertation work) <i>Decoder-only architectures</i>	2025–Present
• Extending FLARE to decoder-only next-token prediction with causal attention.	
• Enabling adaptive attention state size to control memory and compute during training and inference.	
• Implementing fused Triton kernels for causal training, prefill, and decode.	
Equation-based PDE modeling with neural manifolds <i>Hybrid data + physics methods</i>	2024
• Introduced smooth neural fields as nonlinear spatial ansatz functions in equation-based reduced-order modeling.	
• Retained physics-based Galerkin time evolution while learning expressive low-dimensional representations.	
• Attained 199× speedup over full-order simulations in transport-dominated regimes.	

EXPERIENCE

Carnegie Mellon University <i>Research Assistant</i>	Jan 2022–Present
• Wrote solvers for phase field simulations of lithium dendritic growth in solid-state batteries.	
• Wrote fluids dynamics solvers for turbulence closure modeling with differentiable physics.	
Julia Computing <i>Intern Engineer</i>	Apr 2021–Nov 2021
• Built numerical solvers for scientific machine learning ecosystem in Julia.	
Carnegie Mellon University <i>Research Assistant</i>	Sep 2020–Jan 2021
• Developed differentiable geometry representations and meshing algorithms.	
Argonne National Laboratory <i>Research Assistant</i>	Mar 2020–Sep 2020
• Executed large-scale simulations of turbulent airflow over urban landscapes on supercomputers.	
Argonne National Laboratory <i>Research Assistant</i>	May 2018–Jul 2018
• Executed high-fidelity fluid dynamics simulations and analyzed turbulent statistics for closure modeling.	
National Center for Supercomputing Applications <i>Intern</i>	Sep 2017–May 2018
• Numerical simulation of spacetime metric for gravitational wave simulations.

AWARDS

World Conference on Computational Mechanics <i>Best poster in fluid dynamics</i>	2024
University of Illinois <i>Theoretical and Applied Mechanics Merit Award</i>	2019

TECHNICAL SKILLS

ML Architectures: Efficient attention, causal transformers, memory-efficient prefill/decode, neural operators.

ML Systems: PyTorch internals, distributed training, mixed-precision training, Hugging Face.

GPU & Systems: Triton kernel development, FlashAttention-style block algorithms, online softmax, Nsight profiling.

Scientific Foundations: Numerical linear algebra, PDE-constrained modeling, finite elements, spectral methods.

Programming Languages: Python, Julia, C, Fortran 77, MATLAB, UNIX, L^AT_EX.
